

Faculty Review of Open eTextbooks

The [California Open Educational Resources Council](http://www.cool4ed.org) has designed and implemented a faculty review process of the free and open etextbooks showcased within the California Open Online Library for Education (www.cool4ed.org). Faculty from the California Community Colleges, the California State University, and the University of California were invited to review the selected free and open etextbooks using a rubric. Faculty received a stipend for their efforts and funding was provided by the State of California, the William and Flora Hewlett Foundation, and the Bill and Melinda Gates Foundation.

Total Points: 15 out of 30

Please provide comments on any aspect of the subject matter of this textbook:

- The text is very simple, no bells and whistles. The information is presented in an overly formal way with few charts, graphs, bells and whistles.
- It is clean, direct and elegant, i.e. states exactly what needs to be said and nothing more.
- There are no exercises and few examples.
- This would be a difficult text for undergraduate use but it could provide a framework from which a crafty undergraduate professor could construct a symbolic logic class.

Overall Comments

If you were to recommend this textbook to colleagues, what merits of the textbook would you highlight?

- It's a basic scaffolding around which a professor could build a symbolic logic course.

What areas of this textbook require improvement in order for it to be used in your courses?

- I don't think the textbook is approachable for undergraduate students. It could be used for the course if the professor were very active in interpreting the text and providing students with outside examples and exercises.
